

SVFTP

Highly Accelerated Reliable and Secure Large File Transfer

Transcoding and File Based Workflows

Web Publishing and Download Service

Mobile Production and Broadcast

Transfer Large Files Fast. Significant improvement in your production time.

Outperforms UDP based approaches, especially on a heavily loaded, high round trip time network.

UDP approaches may drop data, not SVFTP.

SPEED

Improves file transfer time by 700% compared to standard FTP or HTTP. Resilient to network latency and loss.

FLEXIBILITY

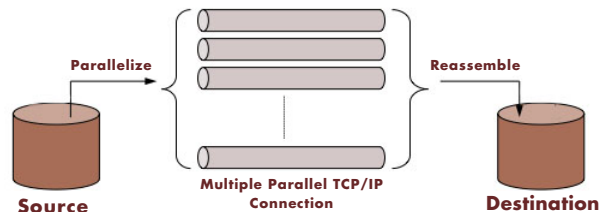

Excels in both high-quality and variable transmission environments. Easily handles long distance transfers.

HIGHLY EFFICIENT SECURITY

Protects your digital assets via KDDI Labs' highly efficient KCipher-2 encryption technology. Comparable to AES, requiring 1/10th the computation time.

RELIABILITY

Novel adaptive parallel streaming approach to ensure reliability without sacrificing performance. Enables file transfers to resume where they left off after network loss.

**Your content production/distribution process takes forever?
Remote production > storage > editing > transcoding > CDN?
No Problem.**
